                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel array comprising at least two isolated nucleotide molecules, each molecule having a sequence capable of uniquely hybridising to a nucleic acid molecule which is an expression product of a gene involved in mitochondrial biology. The array comprises two or more isolated nucleic acid molecules or spots, each molecule having a sequence chosen from sequence of 994 human probes and 2046 mouse probes. An array of the invention is useful for determining an expression profile of a mouse or human sample containing nucleic acid, by contacting the array with the sample under conditions allowing selective hybridisation, and measuring hybridisation of nucleic acid in the sample to the array to

                                                                                                                                                                                              acid substitution in a region which does not affect enzyme activity, of a positively charged amino acid residue, which has the effect of raising the isoelectric point of the peptide. These Mn-SoD variants are useful as medical prepns. for the treatment of human arthritis and diseases caused by active oxygen, and as cosmetic prepns. They are also useful for and diabetes. Examples of variant Mn-SoDs are given in AAQ70431-32. (Updated on 25-MAR-2003 to correct PN field.)

                                              agent comprising determining the expression of a rat toxic response gene(s) in the test animal in response to the agent. The method is useful in drug development, particularly for conducting toxicity studies and analysis before a new drug or compound is approved for human consumption or use. The method is also useful in determining toxicological responses to a new drug. This polynucleotide sequence represents a phase-1 rat CT gene of the invention

                                           The sequence encodes a maganese superoxide dismutase which can be used to catalyse the reduction of superoxide (SO) radicals to hydrogen peroxide and molecular oxygen. It can be used to reduce reperfusion injury following ischaemia and prolong the survival of excised organs. It can also me used as a long anti-inflamatory drug. (Updated on 25-MAR-2003 to correct PF field.) (Updated on 25-MAR-2003 to correct PR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1367 ACTTATGTTAACGGCCTCAACGCTGCCGAGGAGGCTACTCGGCCGCTGTGGGCAAGGAG 1426
                                                                                                                                          The sequence encodes a human manganese superoxide-dismutase (MnSOD), and has been isolated from a human T-lymphocyte cDNA library in phage lambdagt10 in Escherichia coli, by screening with a 5-probe (AATISS91) and a 3-probe (AATISS91) and a 3-probe (AATISS92). The sequence of the insert in plasmid pMS8-4 (obtained by subcloning in plasmid pBR322) is shown. The cDNA may be expressed in e.g. E. coli for production of recombinant MnSOD. The MnSOD product may be cleaved with Aeromonas proteolytica aminopeptidase to produce an N-terminally truncated analogue with lysine and optionally histidine residues removed. The MnSOD analogue may be used in therapy of conditions associated with generation of oxygen free radicals, particularly synovial inflammation, arthritis and lung fibrosis (claimed). (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A cDNA clone (AAT34277) codes for human manganese superoxide dismutase (MnSOD) (AAW00018), an enzyme that catalyges the reduction of superoxide radicals to H2O2 and 02. It was isolated from a human T - cell library cloned into vector gr10 using probes (see also AAT34283- 84) based on portions of mature MnSOD. The MnSOD gene was also identified (see also AAT34278-82). The cDNA can be used for the prodn. of recombinant MnSOD using e.g. Escherichia coll cells as hosts. The MnSOD is useful for reducing reperfusion injury, treating inflammation or bronchial pulmonary dysplasia and for prolonging survival of excised organs. (Updated on 25-MAR-2003 to correct PR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           211 GCCTACGTGAACAACCTGAACGTCACCGAGGAGAAGTACCAGGAGGCGTTGGCCAAGGGA 270

The specification describes a modified hMm SOD which has a catalytic activity which differs from natural hMm SOD in that it exhibits reduced or no product inhibition compared to natural hMm SOD. The natural hMm SOD is especially modified with one or more substitutions in amino acids 26, 30, 34, 74, 143, 159, 161 and 163. The modified hMm SOD is useful for protecting a cell from damage caused by superoxide radicals and for treating a cell from damage caused by superoxide radicals. The protein is useful for treating inflammation and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel human manganese superoxide dismutase protein useful as antioxidant for treating cytotoxicity caused by superoxide radicals, inflammation and reperfusion injury following ischemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            211 gecthaccheanchantehachteachadanahachteachadangachteachadan 270
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1307 GCCCTGGAGCCCTCCATCTCCAAGGAGATCATGACCCTTCACCACCACCAAGCCACCATCAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This cDNA sequence codes for human manganese superoxide dismutase
(hwm.SOD, see AAW98169). Novel Mm.SOD proteins having catalytic activity
which differs from this natural hum.SOD are claimed. The modified proceins
exhibit reduced or no product inhibition, or have greater activity, or
both, compared to natural hum.SOD. The modifications involve one or amino
acid substitutions within the active site of the enzyme, especially at
residues His-26, His-30, Tyr-34, His-74, Gln-143, Asp-159, Trp-161 and
His-163 (see also AAW98171-77). Nucleic acids encoding the modified and
hwm.SOD proteins are also claimed. The modified hum.SOD proteins, or
cypression vectors in which modified hum.SOD nucleic acids is linked to a
promoter (preferably mammalian), can be used to protect a cell linke from
damage caused by superoxide radicals (claimed). They can also be used to
creat subjects suffering from, or at risk of, cytotoxicity caused by
superoxide radicals (claimed) As such, they can be used as antioxidants
in the treatment of a variety of disorders, including inflammation
(claimed), reperfusion injury following ischemia (claimed), and cellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1307 GCCCTGGAGCCCTCCATCTCCAAGGAGATCATGACCCTTCACCACACACCACCATCAG 1366

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method of treating a patient with inflammatory joint disease. The method involves intra-articularly injecting into the afflicted joint a solution of human manganese superoxide dismutase (hSDDm). The treatment is used to treat an inflammatory joint disease, particularly osteoarthritis or rheumatoid arthritis. The method can also be used to treat post ischemic tissue injury. The present sequence represents a cDNA encoding the hSODm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   268 GCCTACGTGAACGTCACGTCACGAGGAGGAGTACCAGGAGGCGTTGGCCAAGGGA 327
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Treating inflammatory joint disease such as osteoarthritis, rheumatoid arthritis and post ischemic tissue injury, comprises injecting human manganese superoxide dismutase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1366
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is the nucleotide sequence of human manganese supercoxide dismutase (hSODM) cDNA. The cDNA was isolated from an adult human kidney cDNA library in lambda-g110 using the probes given in ABN84889-90. The invention relates to methods for hSODM gene cloning and expression in microorganisms, especially Escherichia coli or Saccharomyces cereviales. The hSODM cDNA is inserted into a vector for expression in the microbial host, preferably under conditions which allow for processing to remove the N-terminal methionine. The expression product is useful for treating a partient having inflammancory joint disease (e.g. osteoarthritis or rheumatoid arthritis), or to minimise post-ischaemic tissue damage resulting from disease or surgery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1367 ACTIATGTTAACGGCCTCAACGCTGCCGAGGAGGCTACTCGGCCGCTGTGGGCAAGGAG 1426

The invention relates to a novel device for diagnosis, prognosis and monitoring of therapy having, on its surface, sequences of some or all of specified monocyte-macrophage genes and also of other genes or RNA complementary to the specified genes. The device of the invention may be used to determine gene expression profiles for measurement of monocyte or macrophage activation or inflammation in blood or other tissues, as well as for the diagnosis, prognosis and monitoring therapy in cases of the induced inflammation, arteriosclerosis, tumours, organ or tissue transplants and sepsie. The device provides information for molecular classification and staging of disease, creation of a patient-specific prognostic profile and suggestions about molecular pathogenesis or therapeutic effects, thus facilitating the development of new therapeutic strategies and pharmacological concepts. The current sequence is that of the human BSK DNA of the invention. ò 1367 ACTIAIGITAACGGCCTCAACGCTGCCGAGGAGCTACTCGGCCGCTGTGGGCAAGGAG 1426 126 Device for diagnosis, prognosis and monitoring therapy of e.g. rheumatoid arthritis, comprises immobilized gene sequences from monocyte-macrophage 127 GCCTACGTGAACAACCTGAACGTCACCGAGGAGAAGTACCAGGAGGCGTTGGCCAAGGGA 186 67 GCCCTGGAACCTCACATCAACGCGCAGATCATGCAGCTGCACCACCACGCAAGCACCACGCG .; 0 Sequence 930 BP; 242 A; 208 C; 206 G; 245 T; 0 U; 29 Other; 2.0%; Score 74; DB 9; Length 930; 67.5%; Pred. This invention relates to a combination comprising several CDNAs that are disflerentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed companies. The cDNAs of the invention may have antiarteriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic; cynaecological; vasotropic and cerebroprotective activities and may be used in gene therapy. The CDNAs of the invention may be used in gene therapy. The CDNAs of the invention may be used in a sample, or screening several molecules or compounds to identify a molecule or compound that specifically binds to compend to more compended to a compounds to identify a ligand that specifically binds to the protein, or to produce or purify an antibody to the protein that can be used to detect a protein in a sample. The nucleotides may be useful for recombinant protein from a sample. The nucleotides may be useful for diagnosing, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosoclerosis, cancer, coronary artery disease, hypertension, diabetes, pre-eclampsia, ischaemia reperfusion confusion, or stroke. The CDNAs can also be used for large-scale conjury, restension, diabetes, pre-eclampsia, ischaemia reperfusion conjury, restension, diabetes, pre-eclampsia, or acute diseases can especiated with abnormalities in the expression, amount or acute diseases associated with abnormalities in the expression, amount or distribution of the protein. The present sequence represents a cDNA of the invention content in the present sequence represents a cDNA of the invention content and all all and all and all a

The present invention describes a method (M1) for screening for an anti-
neoplastic agent. The method involves exposing cells to a chemical agent
to be tested for anti-neoplastic activity, determining a change in
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequences (I)

comprises a sequence (S) selected from 847 sequences (I)
activity and can be used in the neceplastic activity. (I) has cytostatic
activity and can be used in gene therapy. MI can be used for screening an
anti-neoplastic agent, and can be used for producing a product which is
the data collected with respect to the anti-neoplastic agent as a result
of MI, and the data is sufficient to convey the chemical structure and/or
properties of the agent. MI can be used in the treatment of cancer such
as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
prostate or pancreatic cancer, adenome, clear cell
cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Milm's

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Direct Submission

Computational haraysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mam. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraties for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system-384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Exploration Research Group in Riken Division of Experimental Animal Research in Riken contributed to Tissues were provided by Vassilis Aidinis (Biomedical Sciences Research Center 'Al. Fleming' Institute of Immunology 14-16 Al. Remanned and sequence of Immunology 14-16 Al. acknowledge.

Computational Analysis of Full-Leapth Mouse CDNAs Compared with

Normalization and subtraction of cap-trapper-selected cDNAs to

prepare full-length cDNA libraries for rapid discovery of new

Gnees. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format

sequencing pipeline with 384 multicapillary sequencer. Genome Res.

10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA

encyclopedia: real-time sequence clustering for construction of a

nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)

connucter based methods for the mouse full-length cDNA

encyclopedia real-time sequence clustering for construction of a

nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)

connucter sequences and denome Exploration Research Group in Riken
